- 6 Hydrographs for BMO Monitor Wells in Bedrock

## APPENDICES

- A Survey Data
- B Data Verification Report
- C Analytical Reports
- D Groundwater Sampling Forms

## **1. INTRODUCTION**

This report provides the results of groundwater monitoring conducted by Freeport-McMoRan Corporation Copper Queen Branch (CQB) in the first quarter 2013 in the vicinity of the Concentrator Tailing Storage Area (CTSA). Groundwater monitoring is conducted pursuant to Tasks 1.0 (well inventory of drinking water wells) and 2.2 (groundwater monitoring) of the Work Plan (Hydro Geo Chem, Inc. [HGC], 2008) to characterize sulfate in the vicinity of the CTSA and subsequent modifications. The Work Plan was initially submitted to Arizona Department of Environmental Quality (ADEQ) on December 17, 2007 pursuant to the Mitigation Order on Consent Docket No. P-121-07 (ADEQ, 2007). CQB initiated water sampling prior to work plan approval while ADEQ was commenting on the Work Plan and CQB was responding to their comments. Revision 1 of the Work Plan was submitted to ADEQ on July 3, 2008 and ADEQ approved the Work Plan on August 3, 2008. On January 25, 2010 CQB proposed a revised groundwater monitoring program (CQB, 2010). The revised monitoring program was approved by ADEQ in April 2010 (ADEQ, 2010). Clear Creek Associates (Clear Creek) prepared this groundwater monitoring report on behalf of CQB.

### **1.1 Scope of Groundwater Monitoring**

The objectives of groundwater monitoring are:

- Determination of the sulfate concentration in drinking water supply (DWS) wells outside of and within one mile of the sulfate plume for the purposes of identifying the need for mitigation actions and tracking the plume margin,
- Identification of the plume margin for ongoing delineation of the plume extent and migration,
- Documentation of the sulfate concentration in the plume and at areas distal to the plume to monitor long-term concentration trends, and
- Measurement of water levels in the vicinity of the plume to document potentiometric conditions (CQB, 2010).

The groundwater sulfate plume consists of groundwater with sulfate in excess of 250 milligrams per liter (mg/L) attributable to the CTSA. The sample collection and analysis specifications of the Work Plan have been retained throughout the groundwater monitoring program. Table 1 provides the schedule for the groundwater monitoring program. Dissolved sulfate is the only constituent monitored.

Figure 1 presents a generalized geologic map of the study area and well locations where data reported herein have been collected. Table 2 lists wells scheduled under the groundwater monitoring program, their availability for sampling, and their sampling status in the first quarter 2013. The collection of groundwater samples was conducted by CQB and Clear Creek personnel. Groundwater sampling and analysis methods used by CQB and Clear Creek are described in the Quality Assurance Project Plan (QAPP) contained in Appendix F of the Work Plan (HGC, 2008). Results of groundwater monitoring are presented in Section 2.

The monitoring purpose listed on Table 2 was updated in the first quarter 2013 to reflect the current well usage. Drinking water supply wells are monitored under the Well Inventory and all other wells monitor the plume extent. A new drinking water well, BOOTH, was identified in the first quarter 2013 and was added to the groundwater sampling schedule under the Well Inventory. Two wells, BOOTH and ECHAVE, were surveyed in the first quarter 2013. The survey data are included in Appendix A.

## **2. GROUNDWATER MONITORING RESULTS**

### **2.1 Results of Monitoring**

Analytical results and groundwater elevation data for the first quarter 2013 are tabulated in Tables 3 and 4, respectively, along with information previously collected under the Mitigation Order. Figure 2 shows the concentrations of dissolved sulfate in the wells sampled in the first quarter 2013. The highest sulfate concentration measured at co-located wells was used for concentration contouring. Figure 3 shows groundwater elevations in the first quarter 2013. Groundwater elevations were calculated using depth to water measurements made under static (nonpumping) conditions for all wells shown on Figure 3. At wells where multiple samples or water levels were collected during the first quarter 2013, the most recent data are shown on the figures.

### **2.2 Quality Assurance/Quality Control Review**

Pursuant to Section 6.4 of the QAPP, a data verification report was prepared for quality assurance and quality control purposes. The data verification report, analytical laboratory reports, and groundwater sampling forms for samples collected by Clear Creek and CQB during the first quarter 2013 are included in Appendices B, C, and D, respectively. As determined by the data verification review, the analytical results for samples collected in the first quarter 2013 by Clear Creek and CQB are of acceptable quality for use in the groundwater monitoring being conducted pursuant to the Mitigation Order.

### **3. FINDINGS**

This report provides the results of groundwater monitoring conducted within the vicinity of the CTSA for the first quarter 2013. Groundwater samples were collected from 80 wells and depth to water measurements were collected in 70 wells. The December 2010 Aquifer Characterization Report (Clear Creek, 2010) provides detailed descriptions of the hydrogeology, water quality, and sulfate plume. Findings based on the first quarter 2013 groundwater monitoring are described below.

- Water quality samples have been collected from wells completed in three principal water bearing units in the area: basin fill, undifferentiated Bisbee Group, and Glance Conglomerate. The undifferentiated Bisbee Group consists, from youngest to oldest, of the Cintura Formation, Upper Mural Limestone, Lower Mural Limestone and Morita Formation. Figures 2 and 3 provide the screened lithology of the wells sampled.
- Sulfate concentration data indicate that the plume extends to the southwest from the vicinity of the former evaporation pond (Figure 1) to the vicinity of Naco and to the south to the vicinity of Bisbee Junction (Figure 2). The groundwater monitoring data indicate that the sulfate plume extends over an oblong area of approximately 2 miles by 3.9 miles and is contained primarily in the basin fill and undifferentiated Bisbee Group except near the former evaporation pond where wells in the Glance Conglomerate have sulfate concentrations greater than 250 mg/L. The extent of the sulfate plume and the sulfate contours as drawn on Figure 2 are based on both historic and current sulfate concentration data. Historic data are available in this report and in the Aquifer Characterization Report (Clear Creek, 2010).
- Comparison of the first quarter 2013 sulfate concentrations with previous quarters indicates no large scale change in the plume geometry since the Mitigation Order sampling began in 2008, although concentration contours within the plume have been modified to reflect current concentrations.
- Figure 4 shows sulfate concentrations through time at public drinking water supply wells that are not receiving mitigation actions. Sulfate concentrations have remained relatively stable over time, although NWC-04 displays the greatest variability in concentration.
- Groundwater elevations decrease from east to west across the study area, indicating westerly groundwater flow (Figure 3).
- Figures 5 and 6 show groundwater elevations over time for BMO monitor wells with screened intervals in basin fill and bedrock, respectively. Groundwater elevations in BMO monitor wells screened in basin fill have decreased over time. The maximum rate of decline measured in the basin fill through the most recent quarter sampled is 1.42 feet per year in

BMO-2010-3B, which has declined 3.51 feet between July 2010 and January 2013. Groundwater elevations in most BMO monitor wells screened in bedrock have also declined over time. The maximum rate of decline measured in the bedrock through the most recent quarter sampled is 7.46 feet per year in BMO-2008-10GU, which has declined 29.42 feet between August 2008 and July 2012. Water level declines range from 0.8 to 4.7 feet per year in BMO-2008-1G, BMO-2008-5M, BMO-2008-6M, BMO-2008-7M, BMO-2008-8M, BMO-2008-9M, BMO-2008-13M, BMO-2010-2M, and BMO-2010-3M. The groundwater elevations in bedrock wells BMO-2008-10GL and BMO-2008-11G display increasing trends. The groundwater elevation in bedrock well BMO-2010-1M is relatively steady over time.

MARCELL	NR	Marcell	Well Inventory	220	N	Y	Water quality sample collected in February 2013. Unable to measure water level because wellhead is not accessible.
MCCONNELL 265	539265	McConnell	Plume	216	Y	Y	Water quality sample collected in January 2013.
MCCONNELL 459	221459	McConnell	Well Inventory	863	Y	Y	Water quality sample collected in January 2013.
METZLER	35-71891	Metzler	Plume	351	Y	N	Water level measured January 2013. Unable to collect water quality sample because well is not operational.
MOORE	538847	Moore	Well Inventory	220	N	Y	Water quality sample collected in January 2013. Unable to measure water level because wellhead is not accessible.
NESS	509127	Ness	Well Inventory	812	Y	Y	Water quality sample collected in January 2013.
NOTEMAN	212483	Bailey	Well Inventory	400	N	Y	Water quality sample collected in January 2013. Unable to measure water level due to obstruction in well.
NWC-02	562944	Naco Water Company	Well Inventory	312	N	Y	Water quality sample collected in January 2013. Unable to measure water level because well was pumping.
NWC-03	203321	Naco Water Company	Well Inventory	312	N	Y	Water quality sample collected in January 2013. Unable to measure water level because well was pumping.
NWC-03 CAP	627684	Naco Water Company	Plume	179	Y	N	Well identified for water level measurements only. Water level measured taken in January 2013.

**TABLE 2**  
**Summary of Groundwater Monitoring Program for First Quarter 2013**

Well Name	ADWR 55 Registry Number	Owner	Monitoring Purpose	Casing Depth (feet bbls)	Water Level Measured?	Water Sample Collected?	Status
NWC-04	551849	Naco Water Company	Well Inventory Sulfate Trend	795	N	Y	Water quality samples collected in January, February and March 2013. Unable to measure water level because well was pumping.
NWC-06	575700	Naco Water Company	Well Inventory	410	N	Y	Water quality sample collected in January 2013. Unable to measure water level because well was pumping.
OSBORN	643436	Osborn	Well Inventory	258	N	Y	Water quality sample collected in January 2013. Unable to measure water level because wellhead is inaccessible.
PALMER	578819	Palmer	Well Inventory	220	N	Y	Water quality sample collected in January 2013. Unable to measure water level because wellhead is inaccessible.
PANAGAKOS	35-76413	Panagakos	Well Inventory	200	Y	Y	Water quality sample collected in February 2013. Water level measured in January and February 2013.
PARRA	576415	Parra	Plume	355	N	Y	Water quality sample collected in January 2013. Unable to measure water level because wellhead is inaccessible.
PIONKE 395	613395	Pionke	Plume	300	Y	N	Water level measured in February 2013. Unable to collect water quality sample because well is not operational.
PIONKE 517	221517	Pionke	Well Inventory	604	Y	Y	Water quality sample collected in January 2013.
POOL	509518	Pool	Well Inventory	313	N	N	Unable to contact well owner for access.
RAMIREZ	216425	Ramirez	Well Inventory	300	N	Y	Water quality sample collected in January 2013. Unable to measure water level due to obstruction in well.
RAY	803772	Ray	Well Inventory	100	Y	Y	Water quality sample collected in January 2013.
ROGERS 596	573596	Rogers, David	Plume	290	Y	N	Well is turned off. Rogers residence uses ROGERS 803. Water level measured in January 2013.
ROGERS 803	641803	Rogers, Ernest M	Well Inventory	140	N	Y	Water quality sample collected in January 2013. Unable to measure water level due to obstruction in well.
ROGERS E	216018	Rogers, Ernest M	Well Inventory	290	Y	Y	Water quality sample collected in January 2013.
RUIZ	531770	Ruiz	Well Inventory	312	Y	Y	Water quality sample collected in January 2013.
SCHWARTZ	210865	Schwartz	Well Inventory	305	Y	Y	Water quality sample collected in March 2013.
STEPHENS	808560	Stephens	Plume	NR	Y	N	Well identified for water level measurements only. Water level measured in January 2013.
SUNBELT	201531	Sunbelt Marketing, Inc.	Plume	380	Y	N	Well identified for water level measurements only. Water level measured in January 2013.
SWAN	NR	Swan	Well Inventory	NR	Y	Y	Water quality sample collected January 2013.
TM-02A	522574	Copper Queen Branch	Plume	925	Y	Y	Water quality sample collected in February 2013.
TM-06 MILLER	522695	Miller	Plume	200	Y	Y	Water quality sample collected in February 2013.
TM-07	522576	Copper Queen Branch	Plume	350	N	Y	Water quality sample collected in February 2013. Unable to measure water level because it is below the sounding tube.
TM-15 MILLER	522699	Miller	Plume	325	N	Y	Water quality sample collected in February 2013. Unable to measure water level due to broken sounding tube.

## 1. INTRODUCTION

This report summarizes the data verification review of groundwater samples collected and analyzed during the first quarter 2013 by Clear Creek Associates (Clear Creek) and Freeport-McMoRan Corporation Copper Queen Branch (CQB) pursuant to Mitigation Order on Consent Docket No. P-121-07 (ADEQ, 2007). Clear Creek and CQB collected groundwater samples pursuant to the groundwater monitoring program approved by ADEQ in April 2010 (CQB, 2010 and ADEQ, 2010). Analytical results for groundwater samples collected for this project during the first quarter 2013 were provided to Clear Creek by SVL Analytical, Inc. (SVL) of Kellogg, Idaho for preparation of the first quarter 2013 Groundwater Monitoring Report.

Quality assurance (QA) and quality control (QC) procedures are specified in the *Quality Assurance Project Plan for Aquifer Characterization Plan* (QAPP) (Appendix F of HGC, 2008) for field sampling, chain-of-custody (COC) documentation, laboratory analysis, and reporting. This report reviews field sampling for samples collected by Clear Creek and CQB. Additionally, sample handling and laboratory QA/QC data are evaluated according to the data quality indicators (DQIs) given in the QAPP.

The laboratory reports for the first quarter 2013 samples including COC forms, laboratory correspondence, QC summaries, data qualifiers, internal QA/QC tests performed by the laboratory are in Appendix C. Based on the results of laboratory control samples, matrix spike/recovery and blank spikes, SVL did not advise any modifications regarding the usability and data validation status of the laboratory test results. The analytical results for all 110 samples collected by Clear Creek and CQB are contained in 9 reports with the SVL laboratory identification numbers in the following table.

## **2. FIELD OPERATIONS**

Field operations for this project consisted of the following for all monitoring wells sampled by Clear Creek and CQB:

- Static water level measurement if possible,
- Well purging,
- Collection of water quality field parameters (pH in standard units [SU], specific conductance [SC] in microSiemens per centimeter [ $\mu\text{S}/\text{cm}$ ], and temperature in degrees Celsius [ $^{\circ}\text{C}$ ]),
- Collection of groundwater samples for water quality analysis,
- Collection of groundwater QA and QC samples, and
- Equipment decontamination.

Documentation of the field activities was evaluated for quality assurance and has been deemed to have met the documentation requirements stated in the QAPP.

### **2.1 Water Level Monitoring**

Static water level measurements were attempted at each well that was sampled (where there are no known obstructions or lack of wellhead access to prevent static water level measurement) and at all wells where water level monitoring was conducted by Clear Creek and CQB. Water levels were measured while the well pump was off. Because it is not always possible to ascertain how long the pump had been off prior to water level measurements (for wells equipped with pumps), some water levels may be affected by residual drawdown. Before measuring the water level at each well, the battery on the water level indicator was checked and the sensitivity level was adjusted, if necessary. Each measurement was collected and verified by measuring the depth to water multiple times in order to obtain a consistent reading and accurate measurement.

### **2.2 Groundwater Sampling**

During this monitoring period, an attempt was made to collect groundwater samples from wells designated in the groundwater monitoring program approved by ADEQ (ADEQ, 2010). Construction and location information for the wells sampled for water quality and water level measurements is listed in Tables 2 and 4 of the main text.

## 2.2.1 Pre-Sampling Field Activities

On each day of sampling, the pH<sup>1</sup> and SC<sup>2</sup> multipurpose meter was calibrated. In addition, the water level indicator was checked for a signal which indicates a working meter and sufficient battery strength. On each day where sampling extended for more than half a day, a mid-day calibration check was performed on the pH and SC probe to ensure accurate measurement. In addition to calibrating the instruments each day, measures were taken to 1) properly decontaminate field equipment, 2) ensure the appropriate storage and transport temperature of the samples, and 3) document activities related to the collection of groundwater samples as part of this project. These objectives were met by 1) replenishing or obtaining supplies of deionized water and ice daily, 2) use of the proper preservative and sample collection containers, 3) properly packing the samples on ice during field activities, 4) using deionized water to properly decontaminate field equipment prior to the start of sampling each day and after sampling at each well, and 5) obtaining the appropriate field notebook in order to document field activities related to the groundwater monitoring program.

## 2.2.2 Well Purging, Field Measurements, and Sample Collection

Three wetted casing volumes were purged from each well prior to sampling, when possible. However, when three casing volumes could not be purged, this information was noted on the groundwater sampling form (Appendix D) at each well for which this was the case. Purge water was discharged to the ground surface.

Field measurements were collected at varying intervals during well purging at each well where a water quality sample was collected. If possible, field parameters were monitored until the measurements stabilized within 0.2 standard units for pH, 2 degrees Celsius for temperature and 200 microSiemens/centimeter for specific conductance as described in Section 4.2.1.2 of the QAPP.

During this monitoring period 95 groundwater samples (duplicate and multiple samples included) were collected for analysis from 80 wells. Groundwater samples were collected by filtering the sample into a 250 milliliter bottle using clean filtration apparatus and one disposable 0.45-micron filter. All bottles were provided by the laboratory and maintained in a clean and secure work area until used in the field.

---

<sup>1</sup> Field pH meters were calibrated using a three point calibration

<sup>2</sup> Field SC meters were calibrated using a standard stock solutions

### 2.2.3 Post-Sampling Field Activities

Post-sampling field activities consisted of equipment decontamination, sample storage, and sample shipping. Field equipment that came into contact with the sample was decontaminated using a small amount of Alconox® detergent and deionized water. After washing, the equipment was rinsed with deionized water.

After sample collection, samples from each well were placed into a plastic bag and stored on ice until they could be packed securely for shipping to SVL. In addition, the sample collected from each well was placed in a bag without ice to prevent the label from getting soaked with water and rubbing off or becoming illegible.

### **3. SAMPLE HANDLING**

All samples collected by Clear Creek and CQB were shipped to SVL for analysis. COC documentation accompanied all samples submitted and included the sample name, collection date and time. Laboratory reports include the date and time the samples were received by SVL. As noted on the analytical data reports from SVL, all of the sample bottles were received intact, properly preserved, and in good condition. The samples were shipped within one to five days of sample collection and the time between sample collection and receipt of samples by SVL was one to seven days. The samples were collected, shipped, and received by SVL within the established holding time for dissolved sulfate analysis in accordance with United States Environmental Protection Agency (EPA) Method 300.0.

## **4. LABORATORY QUALITY CONTROL**

As specified in the QAPP, laboratory QC was maintained for all analyses through proper licensure, the use of approved analytical methods, QC measurements, appropriate turn-around-time for analysis (timeliness), method detection limits (MDLs), and practical quantitation limits (PQLs). Each of these controls is discussed in the following subsections.

The review of laboratory QC included a review to identify any qualified data and an assessment to determine their significance. Additionally, the laboratory QC summaries were reviewed to verify that results met QA criteria.

### **4.1 Licensure**

SVL is licensed with the Arizona Department of Health Services (license number AZ0538) and is accredited in accordance with the National Environmental Laboratory Accreditation Conference.

### **4.2 Analytical Method**

EPA method 300.0 was used for sulfate analysis during this monitoring period.

### **4.3 Method Detection Limit (MDL) and Reporting Limit (RL)**

The MDL and RL of the analytical method used by SVL are shown in the following table. The MDL for analyses of samples was equal to or less than the target MDL identified in the QAPP.

Method	MDL (mg/L)	RL (mg/L)	Target MDL <sup>1</sup> (mg/L)
EPA 300.0	0.07	0.30	10

*mg/L = milligrams per liter*  
<sup>1</sup> Target MDL from Table F.2 of QAPP

## **4.4 Timeliness**

All samples submitted for sulfate analysis were analyzed within the twenty-eight day holding time specified by EPA Method 300.0.

## **4.5 Quality Control Measurements**

The following QC samples were prepared and analyzed:

- Calibration blanks and calibration verification standards
- Analytical spike samples
- Laboratory duplicate samples
- Field blank samples

### **4.5.1 Calibration Blanks and Calibration Verification Standards**

Results from the analyses of the initial calibration blanks and initial calibration verification standards conducted by EPA Method 300.0 were reviewed. The results of each initial calibration blank analyzed showed no detections of the target analyte. All analytical results for the initial calibration verification standards and laboratory fortified blanks showed percent recoveries that were within the acceptance criteria specified by the SVL QA Plan and the QAPP.

### **4.5.2 Analytical Spike**

Analytical spike samples were analyzed for the EPA Method 300.0. The spike samples were prepared by adding a sulfate spike to randomly chosen samples. Instances in which analytical spike recoveries were unusable were qualified with an “M3” flag indicating that the analyte concentration was disproportionate to the spike level or an “M1” flag indicating that the spike level was too high. In each case where an M1 or M3 qualifier was used the laboratory control sample recovery was acceptable and no corrective action was required. The laboratory control samples were prepared by adding a sulfate spike to de-ionized water.

### **4.5.3 Laboratory Duplicate Samples**

Analyses of laboratory duplicate samples were reviewed as part of this quality data verification report. Field duplicate samples are discussed in Section 5.1. In all cases where the relative percent difference (RPD) could be calculated for laboratory duplicate samples, the RPD was

within 20 percent, which is the tolerance range set by the laboratory. The results met QA criteria and demonstrate an appropriate level of precision in laboratory analysis of these samples.

#### 4.5.4 Sample Re-Analysis

No samples required re-analysis for the first quarter 2013.

#### 4.5.5 Blank Samples

During the first quarter 2013, 15 blank samples were collected, including seven field blanks (FB20130109, FB20130110, FB20130115, FB20130117, FB20130118, FB02062013, and FB02072013) and eight field equipment blanks (EQB20130109, EQB20120110, EQB20130114, EQB20130117, EQB20130118, EQB02062013, EQB02072013, and EQB-021813). None of the blank samples collected in the first quarter 2013 had sulfate concentrations above the reporting limit of 0.30 mg/L. The results demonstrate that the sulfate concentrations reported in the first quarter 2013 were not affected by sample collection and sample handling procedures. Field and equipment blank samples were collected in accordance with procedures described in Section 4.2.1.5 of the QAPP. Field and equipment blank samples were collected and submitted along with other samples to evaluate the potential for contaminant introduction under field conditions. As required by Section 4.2.1.5 of the QAPP, a minimum of one field blank and one equipment blank sample was collected for every twenty samples.

## **5. DATA QUALITY INDICATORS**

The QAPP provides several DQIs for assessing the overall quality of the data. These DQIs include the following:

- Precision
- Bias
- Accuracy
- Representativeness
- Comparability
- Completeness
- Sensitivity

Each of these DQIs is discussed below in relation to the first quarter 2013 groundwater sampling and analysis conducted by Clear Creek and CQB.

### **5.1 Precision**

Precision indicates how well a measurement can be reproduced. Precision is quantified by calculating the RPD between duplicate samples and by measuring the water level multiple times before recording the result.

For the QA/QC of analytical data, precision was quantified by calculating the RPDs between duplicates among the following groups of duplicate samples:

- Laboratory duplicate samples
- Field duplicate samples

As discussed in Section 4.5.3 there were no exceedances of RPD QA criteria for any laboratory duplicates. During this monitoring period 10 field filtered duplicate samples (DUP20130110, DUP20130111, DUP20130115, DUP20130116, DUP20130117, DUP20130118, DUP02052013, DUP02062013, DUP02072013, and DUP-0218-13) were collected by Clear Creek and CQB for analysis. The collection of 10 duplicate samples meets the QA/QC method and quantity goal stated in Section 4.2.1.5 of the QAPP.

Sulfate results for the 10 duplicate samples collected are provided in the table below. The range of RPD values was between 0.00 and 10.53 percent, all within the 20 percent acceptance criteria for field duplicates, as stated in Section 3.3.1 of the QAPP. Overall, the DQI for precision is met for the analytical data.

<u>SVL Project No.</u>	Well ID	Duplicate ID	Sample (mg/l)	Duplicate (mg/l)	RPD
<a href="#"><u>W3A0169</u></a>	MCCONNELL 265	DUP20130110	902	889	1.45%
<a href="#"><u>W3A0301</u></a>	RUIZ	DUP20130111	219	211	3.72%
<a href="#"><u>W3A0301</u></a>	BMO-2008-4B	DUP20130115	10.3	9.5	8.08%
<a href="#"><u>W3A0318</u></a>	WEISKOPF 897	DUP20130116	18.2	18.2	0.00%
<a href="#"><u>W3A0318</u></a>	RAY	DUP20130117	126	140	10.53%
<a href="#"><u>W3A0318</u></a>	DODSON	DUP20130118	51.8	51.6	0.39%
<a href="#"><u>W3B0144</u></a>	COB MW-3	DUP02052013	65.1	64.7	0.62%
<a href="#"><u>W3B0144</u></a>	MARCELL	DUP02062103	714	714	0.00%
<a href="#"><u>W3B0144</u></a>	WEED	DUP02072013	14.0	13.2	5.88%
<a href="#"><u>W3B0318</u></a>	BMO-2008-10GL	DUP-021813	498	494	0.81%

mg/L = milligrams per liter

RPD = Relative Percent Difference

For the QA/QC of water level monitoring, precision was met by measuring the water level repeatedly until readings were within 0.03 feet of one another. Readings within that range were obtained from all wells where groundwater measurements were collected so the DQI for precision is met.

## 5.2 Bias

Bias is a systematic distortion of measurements causing consistent errors in one direction. Bias is managed in this data set by the consistent application of standardized sample collection and analysis procedures. As discussed in Section 4.5.5, none of the blank samples had measurable concentrations of sulfate indicating that the sampling collection and analysis procedures did not contribute sulfate to the results.

## 5.3 Accuracy

Accuracy is a measure of the agreement of a measurement to a known value and is measured using the recoveries from laboratory control samples. As discussed in Sections 4.5.1, 4.5.2, and

4.5.3 there were no significant exceedances of the recovery QA criteria for any of the calibration standards, analytical spikes, or laboratory duplicates, respectively. As discussed in Section 4.5.5, none of the blank samples had measurable concentrations of sulfate indicating that the sampling collection and analysis procedures did not contribute sulfate to the results. Water level measurements for the first quarter 2013 were compared to previous quarters to ensure that the measurements were within the expected ranges. Based on this information, the overall accuracy of the data is judged sufficient for the purpose of aquifer characterization.

## **5.4 Representativeness**

All samples and water level measurements were taken from locations specified in the revised groundwater monitoring program (ADEQ, 2010) following sampling procedures specified in the QAPP. Therefore, they provide a good representation of groundwater quality at the sampled locations. The sampling procedures are representative of groundwater quality at the sampled locations because no sulfate was detected in the field or equipment blanks. The analytical data are representative of groundwater conditions because the analyses used standard procedures and methods that met QA/QC guidelines of the QAPP.

## **5.5 Comparability**

All samples were collected using standardized procedures (HGC, 2008) and were analyzed by SVL using standardized methods. Insofar as standardized sample collection and analytical methods are adhered to, the sample results should be comparable.

## **5.6 Completeness**

All samples collected and subsequently analyzed and reported by SVL satisfy the QA/QC criteria for this project. The completeness of analytical results is 100 percent, which exceeds the minimum 90 percent completeness in Section 3.3.6 of the QAPP.

## **5.7 Sensitivity**

The analytical method used to analyze the samples meet the MDL requirements specified in Table F.2 of the QAPP. The water level sounder was accurate to 0.01 feet as specified in Section 4 of the QAPP. Therefore, the analytical sensitivity is considered acceptable for use in aquifer characterization.

### Notes and Definitions

D2	Sample required dilution due to high concentration of target analyte.
M1	Matrix spike recovery was high, but the LCS recovery was acceptable.
LCS	Laboratory Control Sample (Blank Spike)
RPD	Relative Percent Difference
UDL	A result is less than the detection limit
R > 4S	% recovery not applicable, sample concentration more than four times greater than spike level
<RL	A result is less than the reporting limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
N/A	Not Applicable

Solid samples are analyzed on an as-received, wet-weight basis, unless otherwise requested. Non-Detects are reported at the MDL.

Sample preparation is defined by the client as per their Data Quality Objectives.

This report supercedes any previous reports for this Work Order. The complete report includes pages for each sample, a full QC report, and a notes section.

The results presented in this report relate only to the samples, and meet all requirements of the NELAC Standards unless otherwise noted.

### Notes and Definitions

D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of target analyte.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to spike level. The LCS was acceptable.
LCS	Laboratory Control Sample (Blank Spike)
RPD	Relative Percent Difference
UDL	A result is less than the detection limit
R > 4S	% recovery not applicable, sample concentration more than four times greater than spike level
<RL	A result is less than the reporting limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
N/A	Not Applicable

Solid samples are analyzed on an as-received, wet-weight basis, unless otherwise requested. Non-Detects are reported at the MDL.

Sample preparation is defined by the client as per their Data Quality Objectives.

This report supercedes any previous reports for this Work Order. The complete report includes pages for each sample, a full QC report, and a notes section.

The results presented in this report relate only to the samples, and meet all requirements of the NELAC Standards unless otherwise noted.

Reported: 31-Jan-13 14:07

### Notes and Definitions

D2	Sample required dilution due to high concentration of target analyte.
M1	Matrix spike recovery was high, but the LCS recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to spike level. The LCS was acceptable.
LCS	Laboratory Control Sample (Blank Spike)
RPD	Relative Percent Difference
UDL	A result is less than the detection limit
R > 4S	% recovery not applicable, sample concentration more than four times greater than spike level
<RL	A result is less than the reporting limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
N/A	Not Applicable

Solid samples are analyzed on an as-received, wet-weight basis, unless otherwise requested. Non-Detects are reported at the MDL.  
Sample preparation is defined by the client as per their Data Quality Objectives.

This report supersedes any previous reports for this Work Order. The complete report includes pages for each sample, a full QC report, and a notes section.

The results presented in this report relate only to the samples, and meet all requirements of the NELAC Standards unless otherwise noted.

### Notes and Definitions

D1	Sample required dilution due to matrix.
D2	Sample required dilution due to high concentration of target analyte.
M1	Matrix spike recovery was high, but the LCS recovery was acceptable.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to spike level. The LCS was acceptable.
LCS	Laboratory Control Sample (Blank Spike)
RPD	Relative Percent Difference
UDL	A result is less than the detection limit
R > 4S	% recovery not applicable, sample concentration more than four times greater than spike level
<RL	A result is less than the reporting limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
N/A	Not Applicable

Solid samples are analyzed on an as-received, wet-weight basis, unless otherwise requested. Non-Detects are reported at the MDL.

Sample preparation is defined by the client as per their Data Quality Objectives.

This report supercedes any previous reports for this Work Order. The complete report includes pages for each sample, a full QC report, and a notes section.

The results presented in this report relate only to the samples, and meet all requirements of the NELAC Standards unless otherwise noted.

Reported: 05-Mar-13 11:31

### Notes and Definitions

D2	Sample required dilution due to high concentration of target analyte.
M3	The spike recovery value is unusable since the analyte concentration in the sample is disproportionate to spike level. The LCS was acceptable.
LCS	Laboratory Control Sample (Blank Spike)
RPD	Relative Percent Difference
UDL	A result is less than the detection limit
R > 4S	% recovery not applicable, sample concentration more than four times greater than spike level
<RL	A result is less than the reporting limit
MRL	Method Reporting Limit
MDL	Method Detection Limit
N/A	Not Applicable

BMO-2012-1M	W3C0022-04	Ground Water	27-Feb-13 14:30	CLS	01-Mar-2013

Solid samples are analyzed on an as-received, wet-weight basis, unless otherwise requested. Non-Detects are reported at the MDL.

Sample preparation is defined by the client as per their Data Quality Objectives.

This report supercedes any previous reports for this Work Order. The complete report includes pages for each sample, a full QC report, and a notes section.

The results presented in this report relate only to the samples, and meet all requirements of the NELAC Standards unless otherwise noted.

**Notes and Definitions**

- D1 Sample required dilution due to matrix.  
D2 Sample required dilution due to high concentration of target analyte.  
M1 Matrix spike recovery was high, but the LCS recovery was acceptable.  
LCS Laboratory Control Sample (Blank Spike)  
RPD Relative Percent Difference  
UDL A result is less than the detection limit  
R > 4S % recovery not applicable, sample concentration more than four times greater than spike level  
<RL A result is less than the reporting limit  
MRL Method Reporting Limit  
MDL Method Detection Limit  
N/A Not Applicable

**ANALYTICAL REPORT FOR SAMPLES**

Sample ID	Laboratory ID	Matrix	Date Sampled	Sampled By	Date Received
BIMA	W3C0284-01	Ground Water	13-Mar-13 12:15	BD	14-Mar-2013
SCHWARTZ	W3C0284-02	Ground Water	13-Mar-13 11:42	BD	14-Mar-2013

Solid samples are analyzed on an as-received, wet-weight basis, unless otherwise requested. Non-Detects are reported at the MDL.

Sample preparation is defined by the client as per their Data Quality Objectives.

This report supercedes any previous reports for this Work Order. The complete report includes pages for each sample, a full QC report, and a notes section.

The results presented in this report relate only to the samples, and meet all requirements of the NELAC Standards unless otherwise noted.

Time	Elapsed Time (min)	Discharge Rate (gpm)	Total Discharge (gallons)	pH (SU)	Temp (°C)	Specific Conductance (µS/cm)	Comments
1437		Pump On					
1440	3	12	36	7.49	11.4	1011	
1441							Booster Pump turns on.
1443	6		72	7.52	13.5	1010	
							Pump Off

FIELD PARAMETER STABILIZATION: Three consecutive readings within 0.3 su pH, 2 degrees C, and 100 µS/cm)

## SAMPLE INFORMATION

Sample ID	Time	Container Type	Volume	No. of Containers	Analysis Method	Preservative	Filtered (y/n)
FRANCO 383	1445	Poly	250	1	300.0	N	Y

## WATER LEVEL MEASUREMENT COLLECTION

- Water level measurement collected.  
 No water level measurement collected. No access to wellhead/No port in wellhead  
 No water level measurement collected. Obstruction in well.  
 No water level measurement collected. Well is pumping.  
 Other:

## WELL PURGING INFORMATION

- Purged 3 well volumes and field parameters stabilized.  
 Purged 3 well volumes based on previous water level and field parameters stabilized.  
 Purged well until field parameters stabilized.  
 Other: Purge until booster pump kicks on

Additional Comments:

\* SRB Bar collected also at ~120 gal

Sample ID	Time	Container Type	Volume	No. of Containers	Analysis Method	Preservative	Filtered (y/n)
McCONNELL 265	1215	Poly	250	1	300.0	N	X
DUP20130110	"1800"	Poly	250	1	300.0	N	X

## WATER LEVEL MEASUREMENT COLLECTION

Water level measurement collected.

- No water level measurement collected. No access to wellhead/No port in wellhead
- No water level measurement collected. Obstruction in well.
- No water level measurement collected. Well is pumping.
- Other:

## WELL PURGING INFORMATION

Purged 3 well volumes and field parameters stabilized.

- Purged 3 well volumes based on previous water level and field parameters stabilized.
- Purged well until field parameters stabilized.
- Other:

## WELL DATA

Well Depth (ft bbls):	Casing Capacity		
	Nominal Size (inches)	Gallons per Linear Foot	
Casing Diameter (in):	2	0.16	
	4	0.65	
	5	1.02	
	6	1.47	
	8	2.61	
	10	4.08	
Static Water Level (ft bmp):	131.14		
Casing Volume (gal):	x3 =		
Total Volume Purged (gal):		Casing Volume = gallons/foot * water column (feet)	

## FIELD SAMPLING DATA

FIELD PARAMETER STABILIZATION: Three consecutive readings within 0.2 su pH, 2 degrees C, and 200  $\mu$ S/cm)

## SAMPLE INFORMATION

Sample ID	Time	Container Type	Volume	No. of Containers	Analysis Method	Preservative	Filtered (y/n)

## WATER LEVEL MEASUREMENT COLLECTION

Water level measurement collected

- No water level measurement collected. No access to wellhead/No port in wellhead
  - No water level measurement collected. Obstruction in well.
  - No water level measurement collected. Well is pumping.
  - Other:

## WELL PURGING INFORMATION

- Purged 3 well volumes and field parameters stabilized.
  - Purged 3 well volumes based on previous water level and field parameters stabilized.
  - Purged well until field parameters stabilized.
  - Other:

**Additional Comments:**
